

CVI-Strategic Operations Group : [Order_SOG]
Strategic Programs Account [SOG_A_SP] : [Order_SOG_A_SP]
Strategic Programs Portfolio [SOG_P_SP] : [Order_SOG_P_SP]

Opportunity & Vision:

- The Strategic Program Accounts & Portfolio Series offer convenient options to make a contribution or receive benefits of the various programs. This works like the Strategic Operations Group for minimizing disclosure, confidentiality and security clearance levels, while enabling pass through benefits, compensation and opportunity.
- Contributions can be directed through out the Portfolio Series and defined to even more specific options where available or by special instructions. This enables greater resources for program deployment for both personal member and group initiatives and for those members requesting resources to be readily available to create more opportunity and logistical capacity.
- Lead, Champion, Promoter, Support, Joint Venture, Co-development or Partner type of relationships and transactions are enabled to increase the calibre quality of endeavours, while increasing flexibility of contribution, degree of active or passive involvement, anonymity or recognition either individually or by a group.
- This can easily be used as a fund raiser, a crowd funding type of initiative in addition to the massive capabilities offered by the CVI OS 1.0 Account and Portfolio tools for members.

Explore & Discover:

- Excellent privacy, security, asset protection, capital appreciation, options, private wealth management and new wealth generation within a flexible and robust operating environment.
- Optimize astonishing potential, reward and opportunity, while minimizing risks, liabilities and time requirements for portfolio management, all forms of capital, financial & non-financial investment and/or contributions, asset and resource management.
- An intermediate term capital base for program logistics can be organized in advance, for emergencies, additional financial and resource convergence and deployment and with a long term application in both simple and complex environments.
- This is inter-related to the Strategic Operations Account in that it is easy to capitalize on the unlimited capacity of initial organizations and total logistics of programs, accounts, portfolios, series, technology, business combinations, joint ventures, integrated business units, companies, un-incorporated associations and more. It is different in that the resources to contribute, deploy and be received may be much smaller as they all empower the cause and the involvement is not as direct as a prime mover of people, resources and finance.
